Description of the Bug	Person Who Reported	Description of Fix	Date Reported	Date Fixed
Select2 dropdown to choose animal doesn't send value to the SQL server. Most likely to do with JS pulling info.	Cole	change the jquery statement to search for a selected elementin the select statement and then getting the value instead of just retrieving the selected value	11/15/2021	11/17/2021
Page does not refresh after new post is created	Cole		11/15/2021	
Picture wont send in JPG format (not able to convert inputed picture to JPG and send to server)	Cole	Change structure of SQL table to include a column of portrait img extension. Now pull picture extension from SQL table instead of generating extension. Can accept any file type now, and stores original name in DB.	11/12/2021	11/14/2021
"Type:" does not generate on new row, it concantinates right after name and looks weird.	Cole	Just pull normal way and not through select2	11/13/2021	11/16/2021
Make a post does not generate a post	Ryan	when updating the code to implement a dateLost variable, the sql call was miss inputed so after correcting the syntax it worked again	11/18/2021	11/18/2021
Test suite bug where test 6 is not successful	Will	we changed how we looked through the returning array from the sql call and just made sure it had the correct value that we needed	11/18/2021	11/18/2021
